

ANALYSIS OF CAR PLATE HOLDER CONSTRUCTIONS

Mukhtorov Sherzodjon Sobirjon oglu
Fergana Polytechnic Institute

ANNOTATION

This article provides recommendations on how to prevent the design and defects of the plate handles that attach to the windshield, which connects the rear-view mirror to the windshield.

Keywords: Window, 3M structural connecting tape, plate handle.

INTRODUCTION

Mashinasozlik sanoati rivojlanib brogan sari ishlab chiqarilayatgan mashina va mexanizimlar, ularni sifati, ish unumдорligi, ishlash muddatlariga talab kundan kunga ortib bormoqda. Shu navbatda avtomobilarni old oynasiga maxkamlanuvchi orqani ko'rish uchun mo'jalangan ko'zguni old oyna bilan maxkam ushlab turuvchi plastina tutqichiga bo'lgan talab ortib borayotgani ko'rishimiz mumkin. Bunga sabab avtomobilda harakatlanish mobaynida orqada kelayotgan avtomobilni va orqaga harakatlanishni kuzatib borish uchun xizmat qiladi.

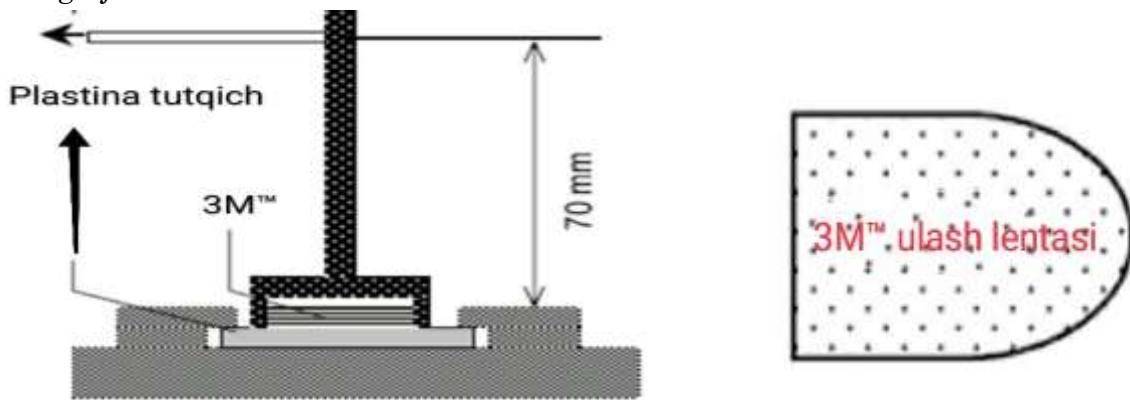

1-rasm. Hozirgi kundagi yetakchi avtomobil ishlab chiqaruvchi zavodlarini avtomobilari uchun ishlataladigan old oynalar.

Mashinasozlikda avtomabillar ishlab chiqarish sanoati qanchali rivojlangan sari, avtomobillar old oynasiga maxkamlanuvchi plastina tutqichiga bo'lgan talab ham kuchayib boryapti. Sabab ko'zgularni zamonaliv korinishlari va konstruksiyalari rivojlanib kelmoqda. Shu o'rinda yangi turdag'i plastina tutqichlari konstruksiyasiga bo'lgan talab ham o'sib bormoqda. Hozirgi kundagi avtomabillar uchun plastina tutqichilarini 2-rasmida ko'rsarilgan.

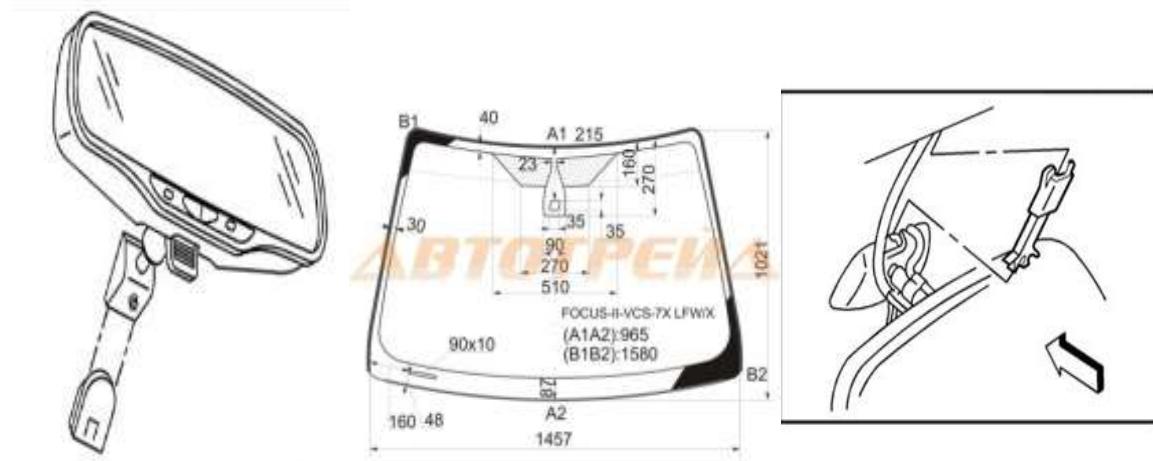

2-rasm. Zamonaliv avtomabillarni 20 xil turdag'i plastina tutqichlarini ko'rinishlari.

Umumiy ish sharoitida plastina tutqichi biriktirish pnevmatik moslamada 30-50 N/sm bosim bilan amalga oshiriladi. Odatda ushlab turish shartlari 140°C da 10 sekund. Bu oddiy avtoklav jarayonlariga javob beradi.

3-rasm. 3M strukturali ularash lentasini plastina tutqichiga yopishtirish sxemasi.

Ushbu jarayonda 3M strukturali ularash lentasini plastina tutqichiga yopishtirish jarayoni ko'rsatilgan. Bu texnologik jarayonda 3M strukturali ularash lentasini avtomatik liniyada pnevmatik moslama yordamida plastina tutqichlarga mos perimetrda kesib joylab boradi. Bu pnevmatik moslama universal bo'lib, har qanday turdag'i plastina tutqichiga moslasa bo'ladi. Hozirgi kundagi avtomobil ishlab chiqaruvchi zavodlar o'z avtomobillari uchun 3M strukturali ularash lentasidan foydalanadi.

4-rasm. Avtomobil old oynasiga 3M strukturali ularash lentasi orqali plastina tutqichini maxkamlab ko'zguni o'rnatish sxemasi va parametri.

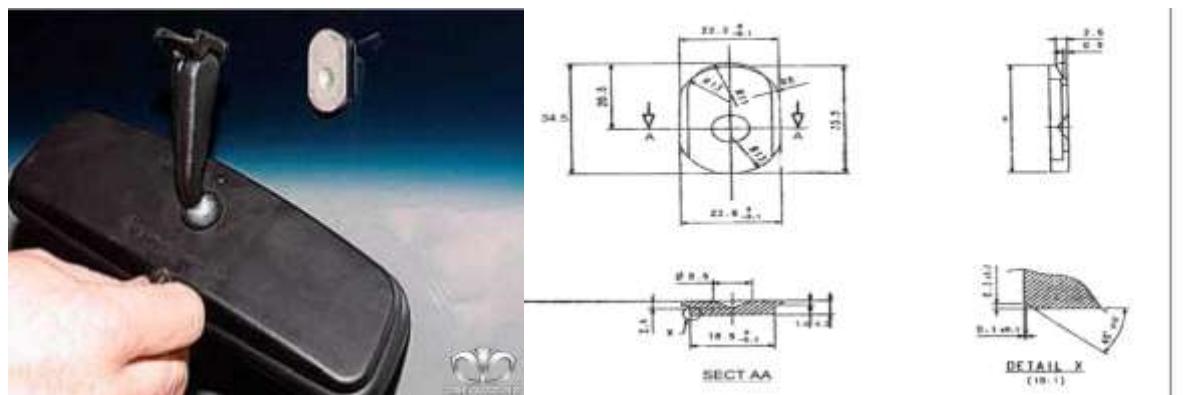

Old oynaga plastina tutqichini maxkamlangandan keyin ko'zguni plastina tutqichiga kirgizib maxkamlash sxemasi ko'rsatib o'tilgan. Ushbu yig'ish jarayonida parametrler larga asosan yig'ish lozim. Sabab ko'zgu old oyna yuqori qismida hamda markazida bo'lishi lozim.

3M strukturali ularash lentasini ikki xil turidan avtomobil ishlab chiqarishda faydalaniadi. 3M germetik va lentali turlaridan plastina tutqichi uchun lentalisidan foydalaniadi.

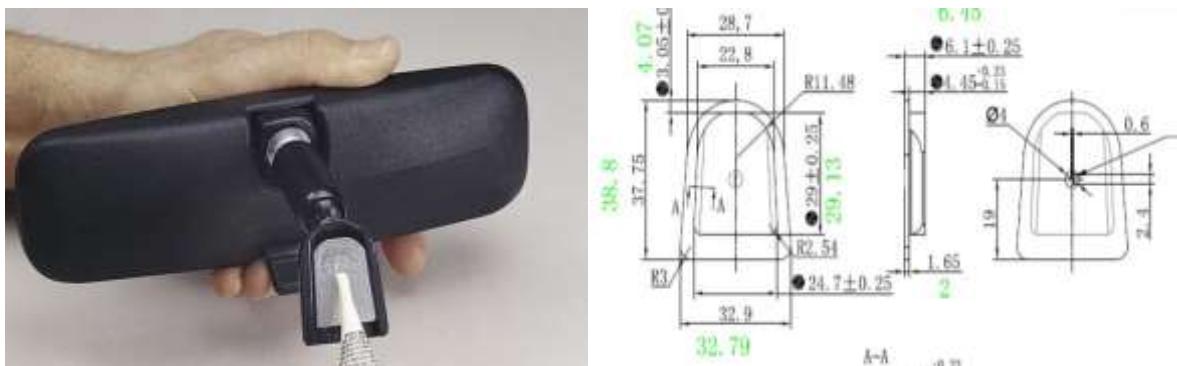

5-rasm. 3M strukturali ulash lentasini germetik va lentali turlari.

Ushbu ulash lentasi orqali barcha turdag'i plastina tutqichlarni oynaga maxkamlash uchun foydalanish mumkin. Hozirgi kundagi zamонавиy avtomobillar ishlab chiqaruvchi zavod talablariga to'la javob beradi.

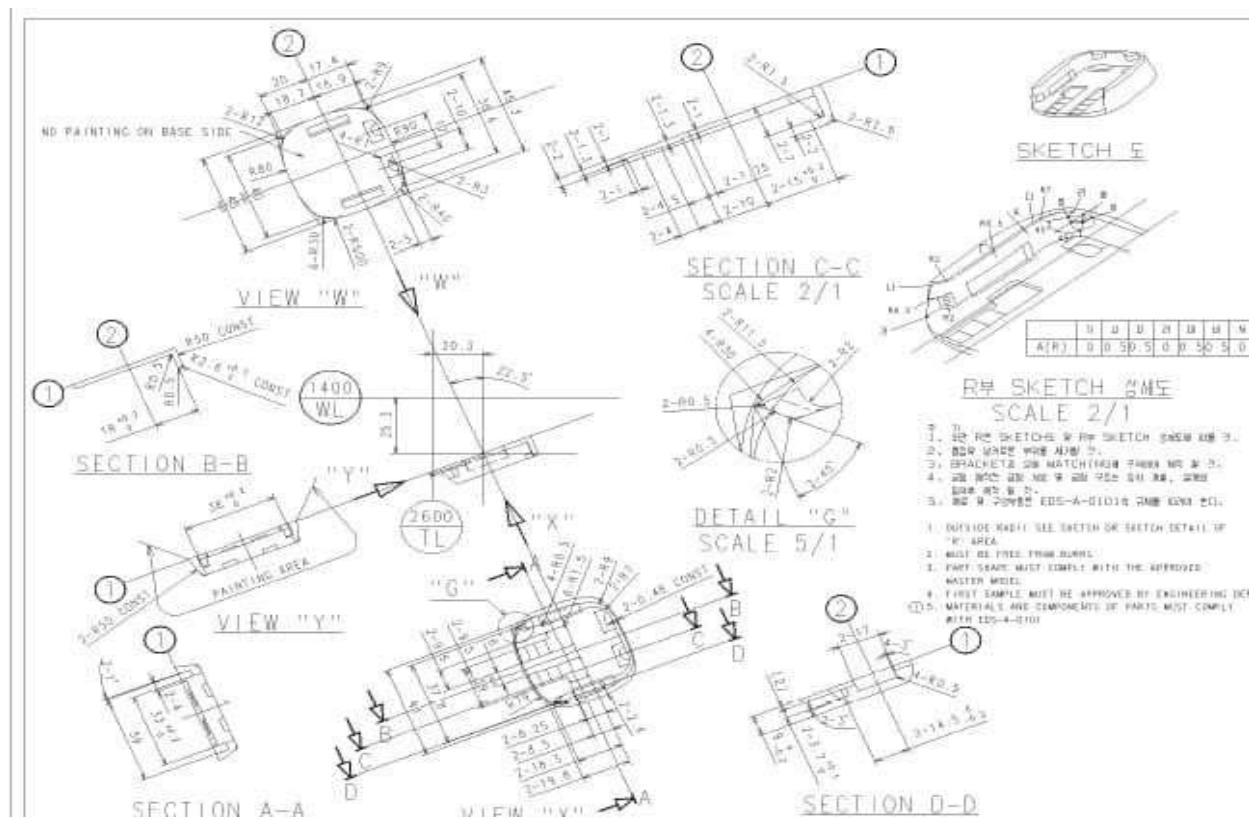

6-rasm. №9263 sonli avtomobil plastina tutqichi chizmasi.

Bu plastina tutqich №9263 sonli plastina tutqichi xisoblanadi. Ushbu plastina tutqich Uz.DAEWOO zavodida Tiko, Matiz, Nexia avtomobillari uchun ishlatalig'an. Avzaligi pastga tepaga ko'zgувни harakatini chekllovchi chuqurcha mavjudlig'i. Kamchiligi yuk ko'tara olish qobiliyat'i pastlig'i. Sabab old oynaga yopishuvchi yuzasi kichiklig'i va yopishuvuvchi yuzasi aniqligi pastligidadir.

7-rasm. №9270 sonli avtomobil plastina tutqichi chizmasi.

№9270 sonli avtomabillar plastina tutqichi xisoblanadi. Ushbu turdagи plastini tutqichlar GM zavodi avtomabillaridan Coblt, Nexia 3R larga ishlatiladi. Kamchligi avtomat karobka avtomabillar uchun ishlatilmaydi. Sabab ko'zguni original variantiga mos kelmaydi. Afzalligi old oynaga maxkamlangan(№9270) plastinaga kirish jarayonida oynada kirish chizig'i hosil qilmaydi.

Bu turdagи plastina tutqichlar GM (O'zbekiston) Zavodida ishlab chiqaruvchi avtomabillardan Lacetti, Malibu avtomabillari uchun ishlataladi. №193561 sonli plastina tutqichi bo'lib, tirovchi detallarni qisib qoluvchi ariqchasi mavjudligi foydali taraflaridan biri bo'lib xizmat qiladi.
