ABSTRACT

This article discusses the current environmental problem in the society, explains the problems associated with the development of legal advocacy for the protection of the environment within the law, as well as ways to promote it.

Keywords: Ecology, propaganda, law, environment, Mother planet, "Nature-society-human" relations, safety criteria, public health, gene pool damage, environmental protection, rational treatment of nature, conservation of flora and fauna, to prevent a global environmental crisis.

INTRODUCTION

The global changes in the scientific and technical spheres on a global scale demand the development and improvement of legal promotion work for the protection of ecology to young people as subjects of active creative knowledge of the system of changes taking place in society. In the program of the 5th Summit of the United Nations (UN) on the environment in 2021 UNEP (United Nations Of Environment Programme): not to change the social, economic, ecologically unsustainable approaches to nature, the emergence of health-related pandemics it was noted that it will be a new reason for the increase of existing problems.

In this regard, environmental promotion such as "Environmental Education Link" in the "World Futures Studies Federation" program, "Education For Our Common Future" educational and promotion portal of sustainable development (GDLN) in London is effectively serving for the development of worship. At the current stage of global development, the issue of living in an environmentally safe space for mankind is becoming an increasingly urgent problem. The ecological danger affecting the environment of the mother planet, the disruption of the "Nature-society-human" relationship forces all the peoples of the earth to think about it more deeply.

Especially among young people, in all organizations, neighborhoods and public places, as a result of people's scientific ideas about society and human co-evolution, based on the selection of propaganda materials for the formation of environmental safety culture among people, improving the quality of propaganda, gradually individualizing the principles of the propaganda process implementation is important.

From this point of view, it is the need of the hour to promote the improvement of the environmental safety culture of the places where all mankind lives and works through new trends. In our country, there are cases of theoretically based integrative approach to the objective study of environmental protection through natural-scientific knowledge, improvement of environmental culture through promotion based on safety criteria among young people. Also, with the implementation of the "Environmental Education Development Concept", the development and improvement of environmental protection promotion work as the main duty of every healthy person should be modernized based on the requirements of the times.

In the Action Strategy for the further development of the Republic of Uzbekistan, "prevention of environmental problems that harm the environment, population health and gene pool" is defined as an urgent task. Therefore, evaluation of ecology as a multidisciplinary field, modern interpretation, content and essence of environmental safety, reflexive thinking and application of integrative approaches to the educational process serve to ensure the effectiveness of environmental education. Decree No. PF-4947 of the President of the Republic of Uzbekistan dated February 7, 2017 "On the Strategy of Actions for Further Development of the Republic of Uzbekistan", Decree of the President of the Republic of Uzbekistan dated December 30, 2021 "Environmental Protection and on measures to organize the activities of state bodies in the field of environmental control" Decision No. 434, as well as other regulatory and legal documents related to this field, the development and improvement of ecological and legal promotion work determines the content of our work today and is important in the implementation of the goal set before us. is considered important.

On the initiative of President Sh. M. Mirziyoyev, it is proposed to implement a special program on active involvement of young people in "Green Space". This "green space" project will create great opportunities for the formation of ecological culture, that is, for the creation of ecologically clean environment and clean products in the future. Based on the above considerations, the development and improvement of legal advocacy in the protection of ecology is considered the most necessary and urgent problem.

At all stages of human civilization, the natural resources of our planet, the world of animals and plants have been a source of essential needs for human life. In the 21st century, where technology and industry are highly developed, problems related to ecology, preservation of biodiversity, and nature protection have a negative impact not only on one region or one country, but on all continents. In fact, one of the urgent tasks before humanity is to protect the environment, treat nature rationally, preserve the world of flora and fauna, and prevent a global ecological crisis.

According to the Decision No. 76 of the President of the Republic of Uzbekistan signed on December 30, 2021 "On measures to organize the activities of state bodies in the field of environmental protection and environmental control", Ecology, environmental protection, natural "Road map" on the rational use of resources and their restoration and further improvement of the environmental control system was prepared, and although it consists of 31 points, the 4th point of this road map was entrusted to the Ministry of Justice. In the process of making decisions on issues related to the environment, the task is to create an opportunity for the public to receive information.

Promotional activities are being carried out by judicial bodies in order to comply with the legal requirements in the field of ecology, environmental protection and nature use.

In particular, out of more than 1,500 promotional events conducted by the Kumkurgan district justice department in January-June 2022: seminars, roundtable discussions, and door-to-door promotional events were organized. The following results were obtained during the events:

1. In order to increase environmental knowledge and encourage skills among young people, together with active environmental students in secondary schools, compliance with legal requirements in the field of environmental protection and nature use is promoted.

2. The new laws and documents adopted on issues related to the environment are constantly being introduced and debates are organized with them in order to destroy respect for the legislation.

3. Promotion of requirements prohibiting and restricting the use of rare and endangered species of wild animals and plants included in the Red Book of the Republic of Uzbekistan in public organizations, general education schools, neighborhood activists, and private entrepreneurs to protect the environment. In preaching, leaflets and flyers were distributed.

4. In order to reduce the pollutants emitted by vehicles into the atmosphere, the use of many electric cars is promoted, and it is necessary to explain to young people that it is everyone's duty to call others to be active in this regard.

Public associations, centers of sanitary epidemiology, political parties and non-governmental non-profit organizations are being actively involved in the promotion activities in the performance of tasks aimed at environmental protection. means attention.

Presenting ecological problems to the population is being distributed in the form of infographics, booklets, flyers and annotations through popular social networks. Through the conducted environmental and legal promotion activities, justice departments, taking into account the specific aspects of the regions, analyzing the accumulated environmental problems, in the future, it will become a habit to promote these issues among the population and young people. It is necessary for everyone to be constantly active.

Today, according to the results of campaigns conducted by the Kumkurgan District Justice Department, the residents and young people of the district are achieving good results through the development and improvement of permanent legal campaigns to protect the environment. Today, through environmental and legal promotion activities, the judiciary is cooperating with the district administration and the district environmental committee in order to achieve separate collection of recyclable waste in the regions. (polymers, paper and metal) enterprise is opened, waste is processed and new jobs are created for the population.

As a result of the increase in the number of people on earth, the increase in its demands and needs, and the decrease in material goods, it has become more and more difficult to obtain things from nature for human existence. As a result, in the process of historical development, man realized and understood that preserving the natural environment is preserving himself. Man is in close contact with nature, and he is realizing more deeply that he is a child of nature. So, the fate of ecological nature on earth is the fate of man. In such a process, it should become a constant necessity to promote that human relations, which include natural reserves, are only for the protection of ecology, in order for nature to meet the needs of society.

In conclusion, it can be said that, as can be seen from the above, in the folk traditions, customs and ceremonies that our ancestors have collected over the centuries, they observed a careful attitude to the land, water, air, surrounding flora and fauna, and constant propaganda work has been carried out. It is important for today's youth to ensure the inheritance of their experience from one generation to another, from one nation to another. It can be seen from the ancient culture of the peoples of Central Asia that the multifacetedness of environmental legal propaganda to young people is one of the important factors of the continuity of human development, which has been progressing historically. Therefore, protecting the environment,

passing on its natural resources to the next generation, contributing to the elimination of environmental problems and promoting it is one of the important tasks before us.
